

Modified Zacuto Grip Relocator for Canon C300

ZIF 010

The Zacuto C300 Grip Relocator puts all important controls of your camera right at your fingertips when using your Polecam.

The Canon C300 removable grip attaches directly to the boom of any Polecam system via a bespoke mounting bracket which is designed and manufactured by Polecam, this provides the user with a comfortable, adaptable and operational grip position whilst maintaining ease of use synonymous with all Polecams and accessories.

The inclusive and exclusive extension cable connects to the port on your camera providing true remote C300 Grip Relocation. This product is the only option on the market today that includes the necessary cabling to attach to your camera. Once its plugged in, users have trigger or on/off control, lens aperture control (NF lenses only), and a programmable function button that can be set to a number of things including waveform, 1 to 1 zoom, zebras, my menu, and many more.

Weight	275g (9.74oz)

Canon C300 Power Tap

ZIF 011

This power tap is a great accessory to all those running the Canon C300 on a Polecam – no need for batteries in the camera, no need to worry about running out of power during a shoot and, it keeps payload weights to a minimum.

The power for the camera is taken directly from the 12Vdc 4 pin Binder connector on the remote Pan & Tilt head drop arms, it is then stepped down to 8.4Vdc through the in-line regulator and cable (50cm/19.68") direct to the C300.
