

Polecam PSP+ with Fishface (*Underwater*) systems

Part# PR030 (Toshiba IK-HD1,2,5 & 4K and similar sized cameras)

Part# PR031 (Antelope PICO)

Camera Not Included - available separately upon request

The Polecam Starter Pack PLUS (PSP+) remains the leading lightweight crane of choice for many globally. It was therefore an obvious decision to provide a complete underwater capable system that gave the Aquatic Sporting, Natural History and Sub Surface Inspection teams an all in one complete solution

The remote head with Pan & Tilt is fully submersible and provides smooth and seamless uninterrupted live transmission of "air to water to air shots".

The current camera housings available accommodate Hi Speed, 4K and HD minicams from many of the leading manufacturers (check compatibility with Polecam before ordering) - Cameras not included

Model Shown is the PSP+ #PR030 underwater system for use with the Toshiba IK-HD1, 2, 5 & 4K minicams

Optional extras shown:

- Atomos Inferno (or similar - please ask).
- Tripod & Dolly
- Counterweights
- Toshiba IK-4K
- Fujinon TF4XA-1 UHD 4mm prime lens

The all in one package of the Polecam rig and Underwater head comprises of:

- 1x Backend to include "V - Lock" battery plates, counterweight bar, tripod mounting plate
- 2x Full Carbon sections (1.1m)
- 1x Vented (1.1m Drilled Carbon full)
- 1x Joystick and Loom/s
- 1x Monitor clamp
- 1x Waterproof remote pan & tilt head to include camera housing

Optional extras available:

Pelicans 1770, Tripod, Dolly, Batteries, Charger, Monitor/Recorder, Covers, Counterweights and additional Carbon sections upto a maximum of 4

The PSP+ Fishface configuration provides a reach of 3.5m from the tripod allowing the remote head in typical applications to operate in depths down to 1m. The vented carbon ensures that the submersed section of the boom floods and drains both quickly and quietly during manouvers. The remote head can also be used in a "stand-alone" environment either locked off or, inverted on a "pool plate" on the pool floor, river bed or ocean floor - providing full 360 coverage at a depth of 10m (or more subject to camera type)

- Polecam Dry Remote Heads - "Long - Part# PU070 or Narrow Part# PU029" are compatible with the PR030/31 system (requires Joystick loom Part# PC046)

Rear view of the #PR031 underwater system for the Antelope Camera Systems PICO Hi Speed camera.

Note the waterproof all-in-one umbilical for power, video and camera control

The Polecam Underwater remote head is just as capable in Air as it is Water
